

Sample Name: **Oligomers of Poly(t-butyl acrylate)**

Sample #: **P9348A-tBuA**

Structure:

Composition:

Degree of Polymerization	PDI
D _p by HNMR: 1	1.05

Synthesis Procedure:

Poly(t-butyl acrylate) is obtained by living anionic polymerization of t-butyl acrylate.¹⁻⁴

Characterization:

The molecular weight and polydispersity index (PDI) are obtained by size exclusion chromatography (SEC) in THF. SEC analysis was performed on a Varian liquid chromatograph equipped with refractive and UV light scattering detectors. Three SEC columns from Supelco (G6000-4000-2000 HXL) were used with triple detectors from Viscotek Co.

Thermal analysis of the samples was carried out using a differential scanning calorimeter (TA Q100) at a heating rate of 10°C/min. The inflection glass transition temperature (*T_g*) of the sample has been considered.

Solubility:

Poly(t-butyl acrylate) is soluble in THF, hexanes (low MW), toluene and CHCl₃. This polymer precipitates from ethanol and methanol containing 10-15% water.

H NMR of the Polymer

SEC of Sample:

P9348A-tBuA Oligomer

Size Exclusion Chromatography of Poly tert-Butyl acrylate

Dp of tBuA monomer is : 1 Mw/Mn 1.04

T_g of poly t-butyl acrylate as function of molecular weight
