

Sample Name:

**Poly(methyl methacrylate-*co*(random)-n-butyl methacrylate)-block-poly(2-hydroxyethyl methacrylate)**

Sample #: P40381-MMAnBuMArAn-b-HEMA

Structure:

Composition:

$M_n \times 10^3$ (g/mol)	39.0-b-37.0
$M_w/M_n$	1.11
MMA: nBuMA	50:50 (mol%)
MMA: nBuMA	41:59 (wt %)
$T_g$ (MMAnBuMA)	70 °C
$T_g$ (HEMA)	110 °C

Synthesis Procedure:

Poly([methyl methacrylate-*co*-n-butyl methacrylate]-*b*-2-hydroxyethyl methacrylate) block copolymer was synthesized by living anionic polymerization. First, methyl methacrylate (MMA) and n-butyl methacrylate (n-BuMA) were co-polymerized; and then 2-[trimethylsilyloxy]ethyl methacrylate (hydroxyl-protected HEMA monomer) was added. The obtained block copolymer was precipitated in acidic methanol solution to deprotect the hydroxyl group.

Solubility:

The polymer is soluble in THF, DMF.

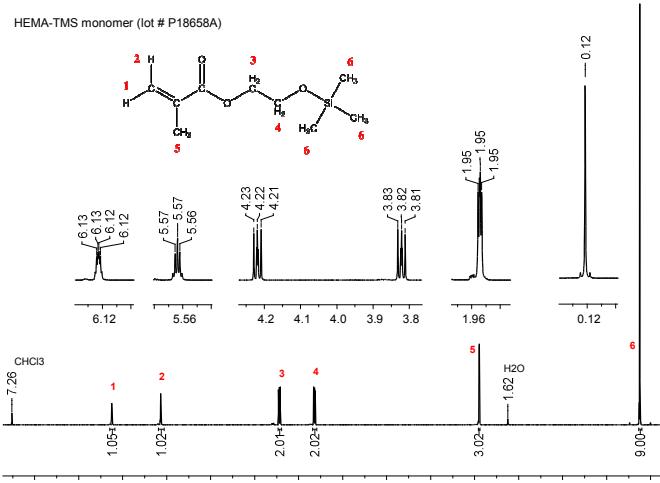

Characterization:

The polymer composition was determined by  $^1\text{H}$  NMR. MMA:nBuMA molar ratio was calculated by comparing the peak area of nBuMA -OCH<sub>2</sub>- protons at 3.9 ppm and the peak area of MMA -OCH<sub>3</sub> protons at 3.6 ppm. Molecular weight of the second (HEMA) block was calculated by comparing the peak area of HEMA -OCH<sub>2</sub>CH<sub>2</sub>O- protons and the peak area of nBuMA -OCH<sub>2</sub>- protons and using SEC data for the first (MMAnBuMA) block.

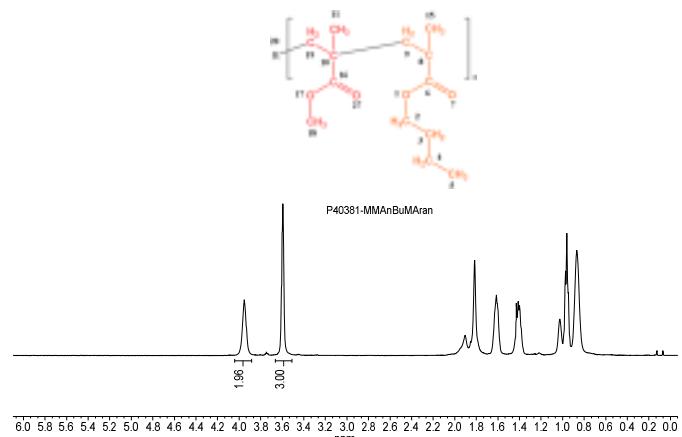

The average molecular weight and polydispersity index were determined by size exclusion chromatography (SEC). For SEC analysis, the MMAnBuMA-b-HEMA block copolymer can be treated with acetic anhydride in presence of pyridine to convert the hydroxy-groups to acetate groups.

Thermal analysis of the sample was done on a TA Q100 differential scanning calorimeter (DSC) at a heating rate of 10°C/min. The glass transition temperature ( $T_g$ ) was determined as a midpoint of step change in heat flow curve for the second heating scan.
