

Sample Name:

Poly urethane based on Adipic acid, Butane diol and 4, 4'-Methylenebis (phenyl isocyanate) MDI-based polyurethanes

Sample #: P19232-PU

Structure:

Composition:

Mw x 10 ³	Mw/Mn (PDI)	Composition Adipic acid: Butanediol:MDI	Tg (°C)
40.5	1.5	1:1:1	-6.6 ; 104.8

Mn of Oligomers around 2,000

Synthesis Procedure:

Polyurethane is prepared in two-step procedure A: oligomerization of Adipic acid with Butane diol and then B reaction with MDI.

Characterization:

An aliquot of the copolymer was analyzed by size exclusion chromatography (SEC) to obtain the molecular weight and polydispersity index (PDI). The chemical composition was verified by ¹H-NMR spectroscopy, which is run in deuterated chloroform at 500MHz. The glass-transition temperature was measured by DSC.

Solubility:

Chloroform (Y)	THF (Y)	DMF (Y)	DMSO (Y)
----------------	---------	---------	----------
