

**Sample Name:** Bis-(2-carboxyphenyl) Adipate

**Sample #:** P20097-3-SAStrimer

**Composition:**

Purity, % (NMR)	97
-----------------	----

**Synthetic Procedure:**

SAStrimer was prepared by interaction of salicylic acid with adipoyl chloride in the presence of pyridine.

The scheme of the reaction is illustrated below:

**Purification:**

Purified from residual salicylic and adipic acids by successive treatment with boiling acetone and chloroform.

**Solubility:**

SAStrimer is soluble in THF, insoluble or sparingly soluble in acetone, chloroform, water.

**Characterization:**

SAStrimer was analyzed by NMR.

**Chemical shifts assignments**

**NMR of SAStrimer**
